Rohit Bajaj

Lab-02:

Pseudocode:

Task 01: Find the maximum number in any of three variables:

- **START**
- **INPUT**
- no:1,no2,no2
- **CHECK**
- IF no1 is greater than no2 and no2 is greater than no3
- PRINT "no1 is Greater"
- IF no2 is greater than no3 and no3 is greater than no1
- PRINT "no2 is greater"
- IF no3 is greater than no1 and no1 is greater than no2
- PRINT "no3 is greater"
- **END**

Task 02: Take three variables as input and add them without using the + operator (Use your head for this):

- **START**
- **INPUT**
- Enter no1,no2,no3
- **Subtract** no1 from negative no2($no=no1-(-no2)$)
- Then Subtract result from negative no3($result=no-(-no3)$)
- **PRINT** "result"
- **END**

Task 03: Create a small calculator which only does '+' or '-' Operations. (Hint: Take three variable inputs with one being used for the operator) :

- **START**
- **INPUT**
- Enter two variables a,b,c
- Enter operation: (+ or -)
- **IF** user enter + operator
- **CALCULATE**
- $c=a+b$
- **PRINT**("SUM")
- **IF** user enter - operator
- **CALCULATE**
- $c=a-b$
- **PRINT** "Difference"
- **END**

ALGORITHM

Task 01: Implement an algorithm where the user enters a number, and an appropriate month is displayed.

- Enter number from 1 to 12
- **IF** no is equal to 1
- Print "January"
- **IF** no is equal to 2
- Print "February"
- **IF** no is equal to 3
- Print "march"
- **IF** no is equal to 4
- Print "April"

- IF no is equal to 5
- Print "May"
- IF no is equal to 6
- Print "June"
- IF no is equal to 7
- Print "July"
- IF no is equal to 8
- Print "August"
- IF no is equal to 9
- Print "September"
- IF no is equal to 10
- Print "October"
- IF no is equal to 11
- Print "November"
- IF no is equal to 12
- Print "December"

Task 02: Implement an algorithm for making a simple calculator with all the operators (+,-,*,/,%):

- **SET** two variables as input and one variable as operation or as output
- Enter no1,no2
- Ask user to enter operation
- IF operation is equal to "+"
- result=no1+no2
- IF operation is equal to "-"
- Result=no1-no2
- IF operation is equal to "*"
- result =no1xno2
- IF operation is equal to "/"
- result =no1/no2
- IF operation is equal to "%"
- result =no1%no2

- ELSE “Invalid operation

FLOWCHART

Task 01: You are working at Toyota Indus Motors and want to assemble a car. Design a flowchart with proper process modules and decision structures to replicate a pipeline production.
